

THE HOME GOLD CURE.

An Ingenious Treatment by which Drunkards are Being Cured Daily in Spite of Themselves.

No Noxious Doses. No Weakening of the Nerves. A Pleasant and Positive Cure for the Liquor Habit.

It is now generally known and understood that Drunkenness is a disease and not weakness. A body filled with poison and nerves completely shattered by periodical or constant use of intoxicating liquors, requires an antidote capable of neutralizing and eradicating this poison and destroying the craving for intoxicants. Sufferers may now cure themselves at home without publicity or loss of time from business by this wonderful "Home Gold Cure" which has been perfected after many years of close study and treatment of inebriates. The faithful use according to directions of this wonderful discovery is positively guaranteed to cure the most obstinate case, no matter how hard a drinker. Our records show the marvelous transformation of thousands of drunkards into sober, industrious and upright men.

Wives Cure Your Husbands!! Children Cure Your Fathers!! This remedy is in no sense a nostrum but is a specific for this disease only, and is so skillfully devised and prepared that it is thoroughly soluble and pleasant to the taste, so that it can be given in a cup of tea or coffee without the knowledge of the person taking it. Thousands of Drunkards have cured themselves with this priceless remedy, and as many more have been cured and made temperate men by having the "Cure" administered by loving friends and relatives without their knowledge in coffee or tea, and believe to-day that they discontinued drinking of their own free will. Do Not Wait. Do not be deluded by apparent and misleading "improvement." Drive out the disease at once for all time. The "Home Gold Cure" is sold at the extremely low price of one dollar, thus placing within the reach of everybody a treatment more effectual than others costing \$25 to \$50. Full directions accompany each package. Special advice by skilled physicians when requested without extra charge. Sent prepaid to any part of the world on receipt of one dollar. Address Dept. E939, Edwin B. Giles & Company, 2330 and 2332 Market street, Philadelphia.

All correspondence strictly confidential.

NEW ELECTRIC SYSTEM.

Test of Railroad in Italy on Which Speed of Forty-Five Miles an Hour is Attained.

The first test of a new system of electric traction is reported in the Electrical Review as having surpassed the expectations of the installing engineers. This is the system that recently attracted so much attention in London, on account of its low bid for the electric traction work in that city.

A correspondent in Italy, where the installation has just been completed, says that a speed of 45 miles an hour was secured without any serious jarring, and that trains of five cars were easily transported at this speed even on decided grades. The dynamos work perfectly at 21,000 volts on a line 67 miles in length. The engineers are particularly well pleased with the behavior of the electric automatic appliances.

This new method of electric traction is what is known as the high-tension polyphase system, and the results of these tests have been awaited with much interest by electric railway interests in general.

New Wonder Work by Tesla.

Nikola Tesla, the inventor, received word the other day that the complicated apparatus he has devised for the transmission of electric energy to all quarters of the globe is completed. Incidentally these instru-

ments are available for the sending of telephonic messages without the aid of wires, but this is only one item in the incredible labor which the Servian has planned his mysterious mechanisms to perform.

Three stations have been arranged for on the other side of the Atlantic—one in Portugal, one in France and one in Germany. By the end of September it is expected that all the mechanism requisite to the trans-Atlantic service will be in position.

FINDS GOOD IN SINGLE LIFE.

Prof. E. Benjamin Andrews Discusses Marriage Question Before Students.

Marriage, celibacy and politics occupied the attention of Dr. E. Benjamin Andrews, chancellor of the University of Nebraska, in his lectures to the students of the University of Chicago the other day. Many a bachelor school-marm was made happy and many a young man went away from the lecture with a lighter heart when the professor declared that celibacy was not a disgrace and that there was no reason on earth why a man or woman should not live single through life and become as great and respected as married persons. He quoted statistics to show that as many great men and great women who had never been married achieved world-wide fame as those who had married.

"Celibacy can no longer have the finger of scorn pointed at it," said Prof. Andrews. "Times have changed and men and women who live the celibate life now are as much honored and may live in such manner as to be as much respected as those who lead the wedded life. In the olden times a young woman considered that she was disgraced and had failed in life if she did not marry, but now women have learned that they can perform a mission in the world whether they are married or not. If they do not look after homes of their own they give their attention to charitable and benevolent work and thus add to the happiness of the human race."

TO FLY TO NEW YORK.

Aeronaut Gustave Whitehead, of Connecticut, Encouraged by His Recent Success.

Gustave Whitehead, the inventor of the flying machine, of Bridgeport, Conn., who recently flew half a mile successfully, is now engaged in constructing a new machine, in which he proposes to fly to New York. He said the other day: "My success in flying with the first model, which is rough and cumbersome, has induced me to build another machine, which will be larger and strong enough to carry two men. I shall fly to New York on my next trial. I am confident that I can fly that distance with my new machine. I will then have my new acetylene-chemical pressure generator ready. I can carry enough calcium carbide, which is the fuel used, to fly for 20 hours. That is more than enough to fly to New York with. My present machine I am going to take to Atlantic City to exhibit and shall demonstrate its practicability there as being able to carry a man."

Inventor Whitehead has received scores of letters since the articles on his successful flight were published from scientific men in all parts of the country asking all sorts of questions and for descriptions of the machine. He has two expert machinists now working on the new machine and money will not be spared in making it the acme of lightness and strength.

Military Pensions in England.

England is imitating the pension system of the United States. There is a bill in parliament providing for a scheme for pensioning widows and orphans of soldiers who have died in the South African war. This measure is being hastened by the officials of the war office in order to stimulate enlistments in the army, which are now very slow.
